

Testing Management Platform

The Project

The project was to deliver a Testing Management platform. HP has customers that ask us to run assessments on their websites and wanted to be able to manage the various sites and assessment types for those sites in a robust web application.

The Challenge

Working remotely with suppliers can always be a 'leap of faith' and requires a great deal of trust from the outset, as well as a set of strong communication skills. GPLUS2 was able to run our project 'virtually' as if they had a physical presence. There were no issues with time zone differences, and clear communications between us ensured efficient delivery of the project.

The Service

Right from the start, GPLUS2 impressed us with their efficient, professional manner - an approach that not only inspired confidence, but generated the results we were looking for. We needed an agency that could turn our ideas into a working system. Collaborating with GPLUS2 has enabled us to do just that.

With their experience in delivering workflow enabled solutions, GPLUS2 was able to create a working prototype in a very short period of time. Their flexible approach and coding methods enabled a fast turn-around of changes and fixes, resulting in a project that was delivered on time and to budget. The resultant application has been thoroughly tested and meets our stringent security standards.

GPLUS2 exceeded our expectations. We will definitely stick with them in the future and would recommend to anyone. They are extremely professional and responsive. Work is top notch.

Ryan English, Practice Principal, HP Security Services (ASC) Atlanta GA
